

**Amendments to the Specification:**

Please replace paragraph [00050] with the following amended paragraph:

[00050]      The model illustrated in Figure 2 corresponds to the one in Figure 1 except that the bearer 5 of the several tissue phantoms 4 shown therein is designed so that the impression of a tube-shaped organ is copied. Also, to permit the use of the invention's device in a sterile area or with sterile implements or instruments, it is also advantageous if a sterile foil 8 is placed in the housing to protect the sterile part of the implement or instrument from contamination each time it is introduced.
